Room Book!ng™

Cost effective, great looking room booking system with Google Calendar and Excel Integration

Sedao Room Book!ng provides great looking digital signage displays for use outside meeting rooms , conference facilities, video conferencing suites, hot desks and any other shared spaces that benefit from being booked or managed using an electronic calendar.

Great Looking Designer Digital Displays

How a screen looks is just as important as how simple it is to use. A modern room booking system needs to fit your branding guidelines whilst also aesthetically fitting your office design. To achieve this Sedao Room Book!ng uses our Nimbus7 display along with our powerful QuickChange software, which merges the information from your calendars with designer templates customised to include your company branding: logo, colour scheme and photos.

With this great combination staff and visitors can see:

- If a room is in use, details of the current meeting, when it will end as well as details of that room's availability later in the day.

- Simple green / red borders showing at a glance if the room is currently free or booked

These details, and more, are displayed on an ultra-crisp 7inch 1980x1200 pixel tablet display housed in a robust surround, incorporating built in security wall fixing, and an attractive acrylic black satin extruded facia.

Technical Description

Room Book!ng uses Sedao's QuickChange software to data merge calendar information from industry standard systems, including Google Calendar and Excel.

scan for movie

By choosing to work with standard room booking systems Sedao have allowed users to book and manage resources in seconds using desktop tools, with which they are already familiar and directly from smartphones using freely available third party apps covering all mobile platforms.

Create individual calendars for every room and the information contained in them is dynamically turned into designer artwork, using the QuickChange software on your own PC (for enhanced security), before being delivered wirelessly (via the cloud) to Nimbus7 screens placed outside your rooms. Use one screen per room, if you only have one entrance, or connect several to the same calendar for rooms or buildings with multiple entrances.

Your Nimbus7 screens display their room booking information as a series of designer images which are customised to include your logo, font, corporate colour and photographs. There are a selection of graphic styles to choose from at www.sedao.co.uk/Room-Booking as well as the option to have fully bespoke designs created for you.

Easy to set up

Simply hang your Nimbus7 screens outside your rooms, using the supplied bracket, then connect them to your Wi-Fi and SedaoLive Cloud account using the built in touchscreen. Our technicians will do the rest including remotely setting up QuickChange on your in-house PC.
