Solution with Class2Home Cable Kit

The Class2Home Cable Kit allows you to streamline the connections between your computer and FrontRow classroom audio system. With this cable kit, you can operate Teacher Edition Capture/Control software and transmit audio over popular video conferencing solutions like Zoom®, Microsoft Teams®, Google Meet® and more.
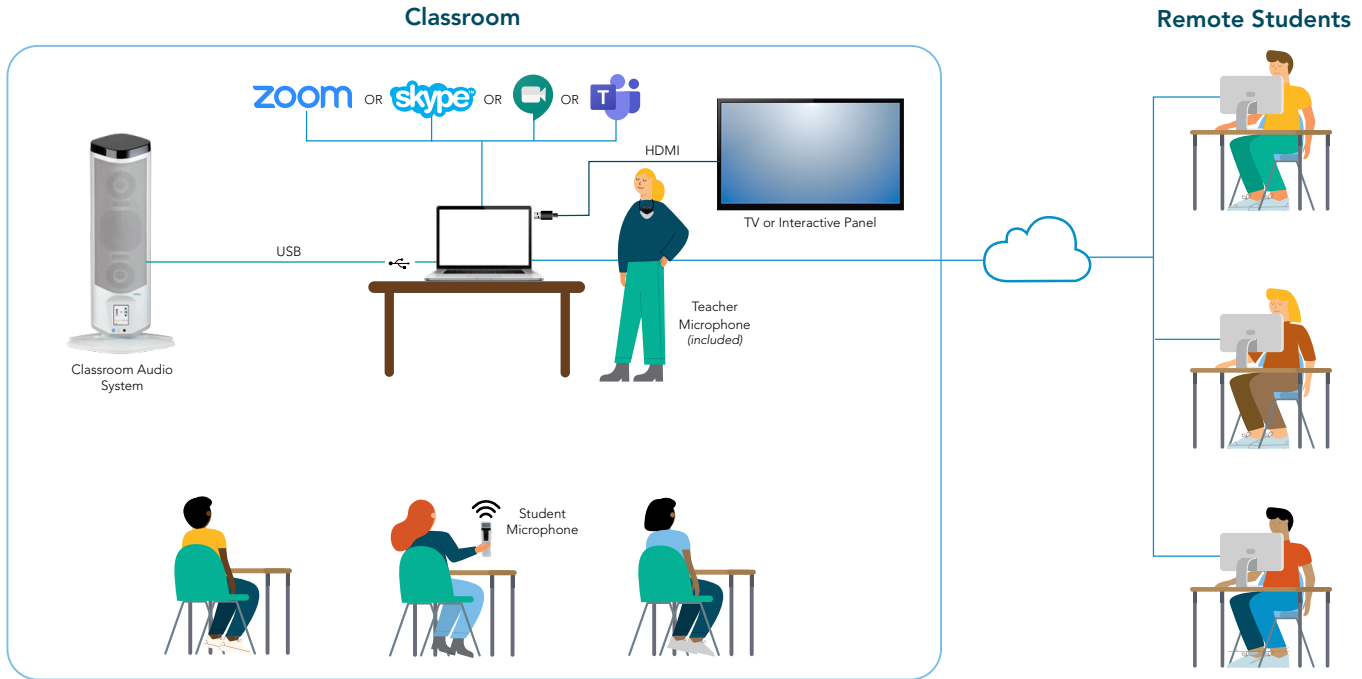

Setup is quick and easy with the Class2Home Cable Kit. Follow these simple instructions:

• For **Juno** and **Lyrik**, connect the cables as shown below. For **ezRoom**, the kit will be prewired in the enclosure, and can be connected to the USB wall plate kit.

• For the **Teacher's computer,** be sure to set the audio input and output to the USB device so that audio from the class can be heard by remote participants, and audio from the computer can be heard in the classroom.

Additional Juno and Smart Receiver (ICR-01) installation guides, user guides and instructions for video conferencing can be found at https://www.gofrontrow.com/resources/manuals-guides/
